

7.1.1 INVERTED STAR PATTERN

Step 1: Start

Begin the program.

Step 2: Take Input

Read an integer n from the user (number of rows).

Step 3: Loop Through Rows

Use a loop that runs from n down to 1.

Why?

Because:

- First row $\rightarrow n$ stars
- Last row $\rightarrow 1$ star

So we go backwards.

Step 4: Print Stars in Each Row

For each row:

- Print i stars (*)
- Do not add spaces between stars
- Move to next line after printing

7.1.1. Inverted Star Pattern

01:21

Write a Python program to print an inverted right-angled triangle star pattern.

For a given number n , the program should print n rows of stars where the first row contains n stars, the second row contains $n - 1$ stars, and each subsequent row has one less star than the previous row, ending with 1 star in the last row.

All rows should be left-aligned with no spaces between the stars.

Input Format:

- Single line contains an integer n representing the number of rows

Output Format:

- Print an inverted right-angled triangle star pattern with n rows

Note:

- Refer to sample test cases for better understanding.

Sample Test Cases

starPrint.py

Submit

1

`n = int(input().strip())`

2

`for i in range(n, 0, -1):`

3

`print("*" * i)`
