9.1.1. Count Vowels in a String - 102:51

Write a program that takes a string as input and prints the total count of vowels in that string. Consider both uppercase and lowercase.

Input Format:

- A single line contains a string that may contain letters, numbers, and punctuation.

Output Format:

- An integer representing the total number of vowels in the input string.

Sample Test Cases

vowel_co...

```
1 text = input()
2 vowels = "aeiouAEIOU"
3 count = 0
4 for char in text:
5     if char in vowels:
6         count += 1
7 print(count)
```

Average time0.018 s18.17 msMaximum time0.028 s28.00 ms
