

9.1.2. Palindrome or not

ALGORITHM

Step 1 : Start

Step 2 : Input string str

Step 3 : Find length of string and store in l

Step 4 : Set flag as True

Step 5 : Repeat steps for each position from start to middle of string

Step 6 : Compare character at beginning with corresponding character from end

Step 7 : If both characters are not equal, set flag as False

Step 8 : After completing all comparisons, check flag

Step 9 : If flag is True, print "Palindrome"

Step 10 : Else print "Not a Palindrome"

Step 11 : Stop

9.1.2. Palindrome or Not 02:20

Write a Python program to take a string as input and check whether the given string is a palindrome or not. A palindrome is a string that reads the same forwards and backward.

Input Format:

- A single line of input contains a string

Output Format:

- If the input string is a palindrome, print "Palindrome", otherwise print "Not a Palindrome"

Sample Test Cases +

palindro... Submit

```
1 s = input().strip()
2
3 reversed_s = s[::-1]
4 if s == reversed_s:
5     print("Palindrome")
6 else:
7     print("Not a Palindrome")
8
9
10
```
