

## 8.1.2 PRIME NO IN A GIVEN RANGE

### ALGORITHM

1. Start
2. Read start
3. Read end
4. Set found = False
5. For num from start to end
6. If num > 1
7. Set prime = True
8. For i from 2 to  $\sqrt{\text{num}}$
9. If num % i == 0
10. Set prime = False and break
11. If prime == True
12. Print num
13. Set found = True
14. If found == False
15. Print "No primes"
16. Stop

8.1.2. Prime Numbers in a Given Range

04:51

Write a Python program to print all prime numbers within a given range (inclusive of both start and end values).

Input Format:

- First line contains an integer representing the start of the range.
- Second line contains an integer representing the end of the range.

Output Format:

- Print all prime numbers in the given range (including start and end if they are prime).  
Print each prime number on a separate line.
- If no prime numbers exist in the range, print: "No primes".

Sample Test Cases

primeNu...

Submit

```
1 start = int(input())
2 end = int(input())
3
4 found = False
5
6 for num in range(start, end + 1):
7     if num > 1:
```
