

10.1.1 Remove Punctuations from a String

ALGORITHM

Step 1 : Start

Step 2 : Input string str

Step 3 : Set char as an empty string

Step 4 : Find length of string and store in l

Step 5 : Set i = 0

Step 6 : Repeat steps while i is less than l

Step 7 : Check if the character is a letter or digit or a space

Step 8 : If yes, add the character to char

Step 9 : Increase i by 1

Step 10 : Go back to Step 6

Step 11 : Print char

Step 12 : Stop

10.1.1. Remove Punctuations from a String

05:30

Write a Python program to remove all punctuation marks from a given string and print the resulting string.

Punctuation marks are special characters that are not letters, digits, or spaces.

The program should keep all letters (uppercase and lowercase), digits, and spaces, but remove all punctuation marks.

Input Format:

- Single line contains a string (may include letters, digits, spaces, and punctuation marks).

Output Format:

- Print the string after removing all punctuation marks.

Note:

- Refer to sample test cases for better understanding.

Sample Test Cases

removeP...

```
1 text = input()
2 result = ""
3 for char in text:
4     if char.isalnum() or char == " ":
5         result += char
6 print(result)
```

Average time: 0.021 s (21.38 ms) | Maximum time: 0.045 s (45.00 ms)

4 out of 4 shown test case(s) passed
4 out of 4 hidden test case(s) passed

Test case 1 (29 ms) [Debug]

Expected output	Actual output
Hello, World!	Hello, World!
Hello World	Hello World

Test case 2 (45 ms)

Test case 3 (20 ms)
